

CITIZENS ENERGY TASK FORCE

MISSION: Working toward a sustainable energy future.

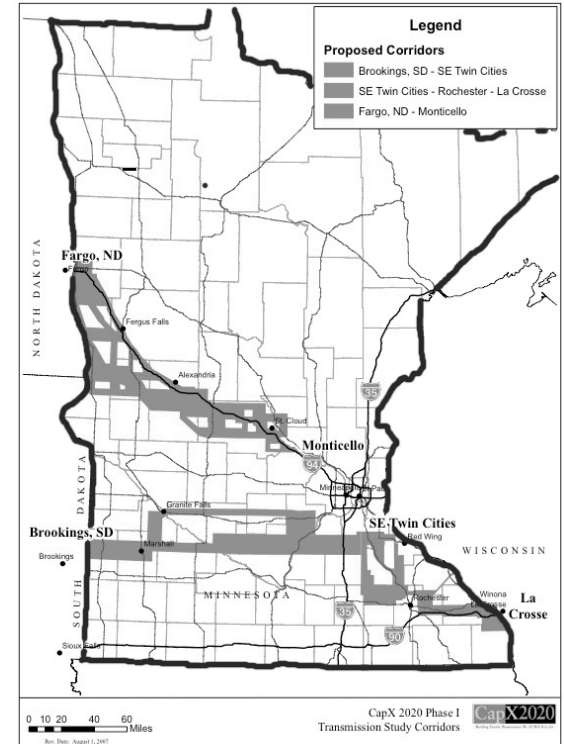

VISION for Minnesota's energy future:

- * **Conservation and energy management** come first to increase energy efficiency, reduce the demand for energy and manage the times when power is needed.
- * **CITIZENS ENERGY TASK FORCE clean, renewable energy** -- wind, solar power, geothermal energy and use of biomass in a sustainable manner.
- * Renewable energy is community-based and **community owned**, helping to develop **wealth and strengthen Minnesota's rural** economy.
- * Energy sources are dispersed and diverse, **reducing the economic and security risk** of depending on just a few power plants and power lines to keep the lights on.
- * Landowners whose property is needed for wind turbines, power lines or other energy facilities are **fairly compensated** and given the chance to benefit from the new energy economy.
- * Commitment to renewable energy brings **new manufacturing and construction jobs to Minnesota**, building a **healthy green economy** for future generations.
